PROFESSIONAL SUMMARY

Results-driven Java Software Engineer with 3+ years of experience in backend and desktop application development. Proficient in Core Java, Spring Boot, RESTful Web Services, React JS, JPOS, PostgreSQL, Docker, and Agile methodologies. Proven ability to design and deliver scalable, high-quality software solutions for enterprise retail environments. Experienced in real-time messaging (MQTT, SSE), device communication, microservices development, and CI/CD practices. Open to relocation across Pan India and remote opportunities. Currently deepening expertise in Kubernetes and AWS cloud services.

TECHNICAL SKILLS

Languages: Java (Core Java), SQL, PostgreSQL
Frameworks / APIs: Spring Boot, RESTful Web Services, Microservices, Java Swing, React JS, JPOS
Messaging & Events: MQTT (Publisher/Subscriber), Server-Sent Events (SSE)
Protocols: Host Emulator, Event Controller, RFID integration
Testing: TestNG (Unit Testing), SonarQube (code quality, 95%+ compliance)
DevOps / Tools: Docker (build, run, port mapping, volume mounting), Azure DevOps, Tortoise SVN
Web Servers: Jetty Server, Apache Tomcat
Utilities: Postman, WinSCP, PuTTY, VNC, Wireshark, Java Decompiler (JD), Eclipse IDE, IntelliJ IDEA
Platforms: Linux (OpenSUSE 42.2/12.1), Windows
Learning: Kubernetes, AWS, CI/CD Pipelines, Kafka

PROFESSIONAL EXPERIENCE

Software Engineer

Mettler Toledo • May 2023 – Present

Project: Fusion

Stack: Core Java | Spring Boot | RESTful Web Services | PostgreSQL | TestNG | Linux | Java Swing | React JS | MQTT | Docker

- Designed and delivered full-stack desktop application features using Java Swing (UI), React JS (frontend components), and Spring Boot RESTful Web Services (backend), serving retail-scale transaction workflows.
- Built and maintained Spring Boot REST APIs to expose backend services, enabling modular integration between transaction modules and device communication layers.
- Developed React JS frontend components integrated with Spring Boot APIs, improving UI responsiveness and reducing page load dependencies.
- Integrated RFID libraries into transaction-handling modules, improving system responsiveness and data accuracy for point-of-sale operations.
- Deployed application components via Jetty Server and implemented Server-Sent Events (SSE) for real-time, push-based UI updates.
- Implemented MQTT (Publisher/Subscriber) messaging architecture for lightweight, asynchronous inter-component communication.
- Developed device communication modules using Host Emulator and Event Controller protocols, enabling accurate simulation of real-world retail hardware.
- Containerized Spring Boot services using Docker; managed multi-instance deployments with docker build, docker run, port mapping, and volume mounting.
- Maintained 95%+ code quality scores in SonarQube and authored unit tests in TestNG, reducing regressions by 20%.

- Contributed to SRS documentation, feasibility analysis, and effort estimation in Agile (Kanban) sprints via Azure DevOps.

Project: Ariva JPOS

Stack: Core Java | Spring Boot | JPOS | TestNG | Linux

- Built and enhanced backend microservices using Spring Boot for weight-scale device management, exposing clean REST APIs consumed by the desktop application layer.
- Designed Spring Boot service layer for JPOS integration, handling protocol-specific commands for reboot, firmware upgrades, and real-time status monitoring.
- Handled precision weight calculation by sending and receiving protocol-specific commands via JPOS libraries.
- Participated in service architecture, API design, and database schema planning discussions, aligning technical deliverables with business requirements.
- Investigated and resolved production incidents through log analysis, ensuring high system availability and minimal downtime.
- Mentored new team members on Spring Boot service design, codebase standards, and development workflows, accelerating onboarding.

EDUCATION

Bachelor of Engineering – Computer Science and Engineering

Sri Krishna College of Technology • 2019 – 2023 • CGPA: 8.1 / 10.0

KEY ACHIEVEMENTS

- Team Excellence Award – Recognized for consistent, impactful contributions to project success and delivery quality.
- Customer Appreciation – Commended by clients for delivering reliable, high-quality solutions on schedule.
- First-Day Task Completion – Received an appreciation card from the team for completing the initial assigned task within a single business day.
